

# Lithium Niobate Photonic Wafers

## Product Description

Lithium Niobate ( $\text{LiNbO}_3$ ) is an extremely versatile nonlinear crystal material. Its electro-optic and nonlinear optical coefficients are used for various photonic applications. Titanium indiffused or annealed proton exchange waveguides can be fabricated in  $\text{LiNbO}_3$  for integrated optical applications. Fast optical switches are commercially manufactured with Deltronic Crystal's lithium niobate wafers. Electro-optically controlled multiplexers and de-multiplexers can be fabricated into lithium niobate wafers. Three-inch diameter wafers are typically produced by Deltronic Crystal for integrated photonic applications.

## Applications

- EO Waveguide Phase Modulators
