

Nonlinear and Electro-Optical Products

Product Description

Lithium Niobate is a noncentrosymmetric large band-gap ferroelectric oxide crystal. It has nonlinear optical applications in harmonic generation, optical parametric oscillation and electro-optic modulation. It offers excellent transmission properties coupled with a high extinction ratio and low half-wave voltage. Deltronix Crystal grows large diameter high quality optical crystals from a congruent melt, using the Czochralski method.

Applications

- Electro-optic Amplitude Modulators
- Electro-optic Phase Modulators
- Electro-optic Q-switches
- BPM Optical Parametric Conversion
- Binary Optics

Features

- Excellent Transmission Properties
- High Extinction Ratio
- Grown by Czochralski Method
